State ID BarCode Application
(FileMaker Pro run-time version)

Download either the State_ID_BarCode Application for Nonpublics (win), State_ID_BarCode Application for Nonpublics (Mac-.sitx), or StateID_BarCode_Mac (Mac.zip) file to your computer. Each of these files is compressed and will need to be uncompressed. The win and Mac.zip should be uncompressed by your existing operating system, while the Mac-.sitx file should be uncompressed by StuffIt Expander. StuffIt Expander is a free download at http://my.smithmicro.com/win/stuffit/index.html. Look for the link button for the "FREE EXPANDER."

While uncompressing your files, make sure to target the files to a convenient location, such as, C:/Program Files or Desktop.

Once your files are uncompressed, locate and open the folder and create a shortcut (Windows) or make an alias (Macintosh) of the application "StateID_BarCode." The icon looks like this -

For Mac users, make sure it is not the file with the extension USR. Put the shortcut or alias on your desktop and close the folder.

Double click the shortcut or alias to launch the application.

Select the "Overview / Help" button to get a list of basic instructions.

Select "District Information" and enter the District Name and School Name(s). Return to Main Menu and use the options to begin entering students.

Macintosh System Requirements: OS X version 3.9 or higher; QuickTime 6.4 or higher.

If the application fails to launch, or if you can't enter data, the folder may be locked or set to "Read Only". Use the Properties (Windows) or Get Info (Macintosh) options to change the settings if necessary.

If you have FileMaker Pro 7.0 or higher and wish to use the unbound version, please contact:
